Audit Updates

Initial Audit	20th August 2022
Corrected	24th August 2022

Contract Diagnostics

Critical Medium Minor

Severity	Code	Description	Status
●	DSM	Data Structure Misuse	Unresolved
●	OWCB	Owner Withdraws Contract Balance	Unresolved
●	L01	Public Function could be Declared External	Unresolved
●	L02	State Variables could be Declared Constant	Unresolved
●	L03	Redundant Statements	Unresolved
●	L04	Conformance to Solidity Naming Conventions	Unresolved
●	L07	Missing Events Arithmetic	Unresolved
●	L09	Dead Code Elimination	Unresolved

DSM - Data Structure Misuse

Criticality	minor
Location	contract.sol#L679
Status	Unresolved

Description

The `userInfo` is defined as a mapping but it uses a singleton structure. The `poolInfo` is defined as an array but it uses a singleton structure.

```
mapping (uint256 => mapping (address => UserInfo)) public userInfo;
PoolInfo[] public poolInfo;
```

Recommendation

The contract could remove the mapping and array structure since it is redundant.

OWCB - Owner Withdraws Contract Balance

Criticality	minor
Location	contract.sol#L738
Status	Unresolved

Description

The contract owner has the authority to withdraw the funds that are indented to operate as the staking rewards. As a result, the users will not be able to unstake.

```
function withdrawTeam(uint256 _amount) public onlyOwner{
    require(_amount<=fundedBalance, 'Not enough tokens.');
    IBEP20(tchToken).safeTransfer(address(msg.sender), _amount);
    fundedBalance = fundedBalance.sub(_amount);
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions.

L01 - Public Function could be Declared External

Criticality	minor / informative
Location	contract.sol#L587,606,615,728,733,738,767,772,777,815,859,864
Status	Unresolved

Description

Public functions that are never called by the contract should be declared external to save gas.

```
owner
renounceOwnership
transferOwnership
setTokenPerBlock
depositTeam
withdrawTeam
deposit
reDeposit
reLock
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality	minor / informative
Location	contract.sol#L704
Status	Unresolved

Description

Constant state variables should be declared constant to save gas.

```
minimumLockPeriod
```

Recommendation

Add the constant attribute to state variables that never change.

L03 - Redundant Statements

Criticality	minor / informative
Location	contract.sol#L546
Status	Unresolved

Description

The contract contains statements that are not used and have no effect. As a result, those segments increase the code size of the contract unnecessarily.

```
Context
```

Recommendation

Remove the redundant statements in order to decrease the code size.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contract.sol#L669,728,733,738,745,750,767,772,777,815,843,868,701,705,706
Status	Unresolved

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
Tier1_TCHStaking
_tokenPerBlock
_amount
_from
_to
_pid
_stakeUntil
_user
tchToken
...
```

Recommendation

Follow the Solidity naming convention.
https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

L07 - Missing Events Arithmetic

Criticality	minor / informative
Location	contract.sol#L728,733,738
Status	Unresolved

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
tokenPerBlock = _tokenPerBlock
fundedBalance = fundedBalance.add(_amount * (10 ** 9))
fundedBalance = fundedBalance.sub(_amount)
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor / informative
Location	contract.sol#L360,389,403,334,478,503,494,171,176,631,662,651
Status	Unresolved

Description

Functions that are not used in the contract, and make the code's size bigger.

```
functionCall
functionCallWithValue
sendValue
safeApprove
safeDecreaseAllowance
safeIncreaseAllowance
min
sqrt
safeTransferBNB
...
```

Recommendation

Remove unused functions.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
