Contract Review

Contract Name	MetaWeb3Pad
Compiler Version	v0.8.15+commit.e14f2714
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/token/0x8dA78645d4cC8CCd2c329fFF23D4cb6692879094
Symbol	MetaWeb3Pad
Decimals	18
Total Supply	1,000,000,000
Domain	metaweb3pad.io

Source Files

Filename	SHA256
contract.sol	dee82fe16148f1aa2d10d45778fff1b82ba2f4d93e50dcf8c47fc7ebd8d718fa

Audit Updates

Initial Audit	2nd August 2022
Corrected	5th August 2022

Contract Analysis

Critical Medium Minor Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

Contract Diagnostics

Critical Medium Minor

Severity	Code	Description
	CR	Code Repetition
	L01	Public Function could be Declared External
	L02	State Variables could be Declared Constant
	L04	Conformance to Solidity Naming Conventions
	L06	Missing Events Access Control
	L07	Missing Events Arithmetic
	L09	Dead Code Elimination
	L14	Uninitialized Variables in Local Scope

CR - Code Repetition

Criticality	minor
Location	contract.sol#L741

Description

This code segment is repetitive in the contract. This segment increases the code size of the contract unnecessarily.

```
uint256 initialBalance = address(this).balance;

address[] memory path = new address[](2);
path[0] = address(this);
path[1] = uniswapV2Router.WETH();

uniswapV2Router.swapExactTokensForETHSupportingFeeOnTransferTokens(
    contractTokenBalance,
    0,
    path,
    address(this),
    block.timestamp);

uint256 newBalance = address(this).balance - initialBalance;
```

Recommendation

Create an internal function that contains the code segment and remove it from all the sections.

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L65,70,92,96,100,112,117,121,126,144,149,556,570,596,604,608,612

Description

Public functions that are never called by the contract should be declared external to save gas.

```
isExcludedMaxWallet
isExcludedMaxTxn
isExcludedFromFees
excludeFromLimits
setAutomatedMarketMakerPair
_openTrading
decreaseAllowance
increaseAllowance
transferFrom
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L456,461

Description

Constant state variables should be declared constant to save gas.

```
swapEnabled
DEAD
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L263,264,281,301,556,583,630,641,679,456,467,468

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_isExcludedMaxWallet
_isExcludedMaxTxn
DEAD
_marketingWallet
_marketingTaxOnSell
_lpTaxOnSell
_marketingTaxOnBuy
_lpTaxOnBuy
_operator
...
```

Recommendation

Follow the Solidity naming convention.
https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

L06 - Missing Events Access Control

Criticality	minor
Location	contract.sol#L583

Description

Detected missing events for critical access control parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
operator = _operator
```

Recommendation

Emit an event for critical parameter changes.

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L686

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
swapTokensAtAmount = newAmount
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L193

Description

Functions that are not used in the contract, and make the code's size bigger.

```
_burn
```

Recommendation

Remove unused functions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor
Location	contract.sol#L732

Description

The are variables that are defined in the local scope and are not initialized.

```
liquidityTokens
```

Recommendation

All the local scoped variables should be initialized.

Summary

MetaWeb3Pad is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. There is also a limit of max 15% fees. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
