Audit Updates

Initial Audit	2nd June 2022
Corrected	

Contract Analysis

Critical Medium Minor Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ST - Stop Transactions

Criticality	critical
Location	contract.sol#L848, 834, 880, 721

Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the _maxTxAmount to zero.

```
if(from != owner() && to != owner())
            require(amount <= _maxTxAmount, "Transfer amount exceeds the
maxTxAmount.");
```

The owner can also stop transactions for multiple users by calling the setAntibotModeWhitelist function.

```
if (!isAntibotModeEnabled) return;
        if (from == owner() || from == airdropContract) return;
        require(antibotModeWhitelist[from] && antibotModeWhitelist[to],
"Address not in antibot mode whitelist");
```

The contract owner can also convert the contract into a honeypot and prevent users from selling by increasing the selling taxes.

```
else if(isSell){
                _taxFee = _sellTaxFee;
                _advestisementFee = _sellAdvestisementFee;
                _burnFee = _sellBurnFee;
            }
```

```
uint256 tFee = calculateTaxFee(tAmount);
        uint256 tAdvertisement = calculateAdvestisementFee(tAmount);
        uint256 tBurn = calculateBurnFee(tAmount);

        uint256 tTransferAmount =
tAmount.sub(tFee).sub(tAdvertisement).sub(tBurn);
```

Recommendation

The contract could embody a check for not allowing setting the `_maxTxAmount` less than a reasonable amount. A suggested implementation could check that the minimum amount should be more than a fixed percentage of the total supply.

The issue about antibotWhitelist will be resolved when the contract owner calls the `turnOffAntibotMode` function.

The contract could embody a check for not allowing setting the total tax fees more than 100%.

The team should carefully manage the private keys of the owner’s account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ELFM - Exceed Limit Fees Manipulation

Criticality	critical
Location	contract.sol#L685, 691, 696

Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the `setTaxFeePercent` , `setBurnFee` and `setAdvestisementFeePercentage` function with a high percentage value.

```
function setTaxFeePercent(uint256 buyTaxFee, uint256 sellTaxFee) external
onlyOwner() {
        _buyTaxFee = buyTaxFee;
        _sellTaxFee = sellTaxFee;
    }
```

```
function setBurnFee(uint256 buyBurnFee, uint256 sellBurnFee) external
onlyOwner() {
        _buyBurnFee = buyBurnFee;
        _sellBurnFee = sellBurnFee;
    }
```

```
function setAdvestisementFeePercent(uint256 buyAdvestisementFee, uint256
sellAdvestisementFee) external onlyOwner() {
        _sellAdvestisementFee = sellAdvestisementFee;
        _buyAdvestisementFee = buyAdvestisementFee;
    }
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner’s account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

Critical Medium Minor

Severity	Code	Description
	L01	Public Function could be Declared External
	L02	State Variables could be Declared Constant
	L04	Conformance to Solidity Naming Conventions
	L07	Missing Events Arithmetic
	L09	Dead Code Elimination

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L431,440,446,451,459,554,558,562,566,570,574,579,584,588,593,599,604,609,613,619,670,675,681,820,824,828

Description

Public functions that are never called by the contract should be declared external to save gas.

```
setAntibotModeWhitelist
setAirdropContract
turnOffAntibotMode
includeInFee
manageAmmPairs
excludeFromFee
reflectionFromToken
totalFees
isExcludedFromReward
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L533,503,501,502,497

Description

Constant state variables should be declared constant to save gas.

```
_tTotal
_symbol
_name
_decimals
BUSD
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L479,774,780,786,824,505,506,507,509,510,511,522,527,533

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
BUSD
_maxTxAmount
_advestisementFee
_sellBurnFee
_sellAdvestisementFee
_sellTaxFee
_buyBurnFee
_buyAdvestisementFee
_buyTaxFee
...
```

Recommendation

Follow the Solidity naming convention.
https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L685,691,696,701

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_maxTxAmount = _tTotal.mul(maxTxPercent).div(10 ** 3)
_sellAdvestisementFee = sellAdvestisementFee
_buyBurnFee = buyBurnFee
_buyTaxFee = buyTaxFee
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L357,317,327,342,352,264,291

Description

Functions that are not used in the contract, and make the code's size bigger.

```
sendValue
isContract
functionCallWithValue
functionCall
_functionCallWithValue
```

Recommendation

Remove unused functions.

The domain has been created 17 days before the creation of the audit. It will expire in 12 months.

There is no public billing information, the creator is protected by the privacy settings.

Summary

There are some functions that can be abused by the owner like stopping transactions and manipulating fees. The contract can be converted into a honeypot and prevent users from selling if the owner abuses the admin functions. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
