## Audit Updates

<b>Initial Audit</b>	23rd May 2022
<b>Corrected</b>	

# Contract Analysis

● Critical   ● Medium   ● Minor   ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

# Contract Diagnostics

● Critical   ● Medium   ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L04	Conformance to Solidity Naming Conventions
●	L05	Unused State Variable
●	L07	Missing Events Arithmetic
●	L09	Dead Code Elimination
●	L12	Using Variables before Declaration
●	L14	Uninitialized Variables in Local Scope
●	L15	Local Scope Variable Shadowing

## L01 - Public Function could be Declared External

**Criticality**

minor

**Location**`contract.sol#L352,378,386,397,415,437,456,741,750,800,815,843,857,930,934,941,947,1351,1360,1367,1388,1407,1436,1481,1500,1504,1508,1512,1516,1734,1922,1966`

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
process
getAccountAtIndex
manualSwapTokensForEth
dividendTokenBalanceOf
withdrawableDividendOf
isExcludedFromMaxWallet
isExcludedFromMaxTx
isExcludedFromFees
updateGasForProcessing
...
```

### Recommendation

Use the external attribute for functions never called from the contract.

## L04 - Conformance to Solidity Naming Conventions

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L843,850,857,867,769,775,998,999,1016,1052,1252,1336,1341,1346,1351,1355,1431,1436,1809,1198,1200,1205,1206,1207,1208,1210,1212,1213,1214,1215,1216,1220,1221,1877

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_account  
_shibaWalletAddress  
_marketingWalletAddress  
_SellTotalFees  
_SellBackSHIBAFee  
_SellMarketingFee  
_SellLiquidityFee  
_SellETHRewardsFee  
_BuyTotalFees  
...
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

## L05 - Unused State Variable

**Criticality**

minor

**Location**

contract.sol#L594

### Description

There are segments that contain unused state variables.

```
MAX_INT256
```

### Recommendation

Remove unused state variables.

## L07 - Missing Events Arithmetic

**Criticality**

minor

**Location**

contract.sol#L1431,1436,1451,1461,1567

### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
swapTokensAtAmount = swapAmount  
_SellETHRewardsFee = sellEthRewardFee  
_BuyETHRewardsFee = buyEthRewardFee  
maxTransactionAmount = _maxTxAmount  
maxWalletToken = _maxToken
```

### Recommendation

Emit an event for critical parameter changes.

## L09 - Dead Code Elimination

**Criticality**

minor

**Location**

contract.sol#L877,640

### Description

Functions that are not used in the contract, and make the code's size bigger.

```
abs  
_transfer
```

### Recommendation

Remove unused functions.

## L12 - Using Variables before Declaration

**Criticality**

minor

**Location**

contract.sol#L1679

### Description

The contract is using a variable before the declaration. This is usually happening either if it has not been declared yet or the variable has been declared in a different scope.

```
iterations
claims
lastProcessedIndex
```

### Recommendation

The variables should be declared before any usage of them.

## L14 - Uninitialized Variables in Local Scope

**Criticality**

minor

**Location**

contract.sol#L1679

### Description

There are variables that are defined in the local scope and are not initialized.

```
iterations  
lastProcessedIndex  
claims
```

### Recommendation

All the local scoped variables should be initialized.

## L15 - Local Scope Variable Shadowing

**Criticality**

minor

**Location**

contract.sol#L795,843,850,857,867

### Description

There are variables that are defined in the local scope containing the same name from an upper scope.

```
_owner  
_symbol  
_name
```

### Recommendation

The local variables should have different names from the upper scoped variables.

## Summary

ETH SHIBA is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. The fees are fixed to 12% for the buys and 15% for the sales.

The team has renounced ownership as a result the owner's methods cannot be called.

## Disclaimer

## About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.

The Cyberscope team
