## Audit Updates

<b>Initial Audit</b>	5th July 2022
<b>Corrected</b>	6th July 2022

# Contract Analysis

● Critical   ● Medium   ● Minor   ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

# Contract Diagnostics

● Critical    ● Medium    ● Minor

Severity	Code	Description
●	FSA	Fixed Swap Address
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L05	Unused State Variable
●	L09	Dead Code Elimination
●	L13	Divide before Multiply Operation

## FSA - Fixed Swap Address

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L606

### Description

The swap address is assigned once in the constructor and it can not be changed. The decentralized swaps sometimes create a new swap version or abandon the current. A contract that cannot change the swap address may not be able to catch-up the upgrade.

```
constructor() ERC20Detailed("Lucky Akita", "LAKITA", uint8(DECIMALS)) Ownable() {  
    router = IPancakeSwapRouter(0x9Ac64C66e4415144C455BD8E4837Fea55603e5c3);  
  
    pair = IPancakeSwapFactory(router.factory()).createPair(  
        router.WETH(),  
        address(this)  
    );  
};
```

### Recommendation

It could be better to allow the swap address mutation in case of future swap updates.

## L01 - Public Function could be Declared External

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L483,487,491,510,523,528

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
transferOwnership  
renounceOwnership  
owner  
decimals  
symbol  
name
```

### Recommendation

Use the external attribute for functions never called from the contract.

## L02 - State Variables could be Declared Constant

**Criticality**

minor

**Location**

contract.sol#L570

### Description

Constant state variables should be declared constant to save gas.

```
totalFee
```

### Recommendation

Add the constant attribute to state variables that never change.

## L04 - Conformance to Solidity Naming Conventions

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L38,272,274,305,839,859,860,861,878,543,544,545,548,563,564,565,566,568,572,598

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_gonsPerFragment  
feeDenominator  
sellFee  
burnFee  
bankFee  
riskFee  
treasuryFee  
_isFeeExempt  
_decimals  
...
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>.

## L05 - Unused State Variable

**Criticality**

minor

**Location**

contract.sol#L350

### Description

There are segments that contain unused state variables.

```
MAX_INT256
```

### Recommendation

Remove unused state variables.

## L09 - Dead Code Elimination

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L378

### Description

Functions that are not used in the contract, and make the code's size bigger.

```
abs
```

### Recommendation

Remove unused functions.

## L13 - Divide before Multiply Operation

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L868

### Description

Performing divisions before multiplications may cause lose of prediction.

```
liquidityBalance = _gonBalances[pair].div(_gonsPerFragment)
```

### Recommendation

The multiplications should be prior to the divisions.

## Summary

Lucky Akita Token is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a limit of max 6% fees for sell transactions and a 5% fee for buy transactions.

## About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
