## Audit Updates

<b>Initial Audit</b>	23rd September 2022
<b>Corrected</b>	

# Contract Analysis

● Critical ● Medium ● Minor / Informative ● Pass

Severity	Code	Description	Status
●	ST	Stops Transactions	Passed
●	OCTD	Transfers Contract's Tokens	Passed
●	OTUT	Transfers User's Tokens	Passed
●	ELFM	Exceeds Fees Limit	Passed
●	ULTW	Transfers Liquidity to Team Wallet	Passed
●	MT	Mints Tokens	Passed
●	BT	Burns Tokens	Passed
●	BC	Blacklists Addresses	Passed

# Contract Diagnostics

● Critical   ● Medium   ● Minor / Informative

Severity	Code	Description	Status
●	PITD	Proportional Initial Token Distribution	Unresolved
●	DFDP	Dev Funds Distribution Precision	Unresolved
●	RRAC	Redundant Role Access Check	Unresolved
●	L01	Public Function could be Declared External	Unresolved
●	L02	State Variables could be Declared Constant	Unresolved
●	L04	Conformance to Solidity Naming Conventions	Unresolved
●	L05	Unused State Variable	Unresolved
●	L07	Missing Events Arithmetic	Unresolved
●	L09	Dead Code Elimination	Unresolved

## PITD - Proportional Initial Token Distribution

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L73
<b>Status</b>	Unresolved

### Description

The initial token shares are distributed to the addresses in a fixed amount that is summed up to the total supply.

```
...
/* 18.4 % of the supply will be sent to the owner,
this funds will be entirely used for the presale on pinkswap,
and for the initial liquidity pool on pancakeswap */
uint initialownerbalance = 46000000 * 10 **18;
_balances[owner] = initialownerbalance;
emit Transfer(address(0), owner, initialownerbalance );
...
```

### Recommendation

The contract could use proportional calculation in order to make the distribution more clear and more readable. For instance, instead of `46000000 * 10 **18` it could be `_totalSupply * 184/1000`

## DFDP - Dev Funds Distribution Precision

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L172
<b>Status</b>	Unresolved

### Description

The dev funds distribution is divided into 3 equal shares. Since Solidity has not have floating types, then the result of a deviation may miss the decimals precision. As a result, the split shares will not have the exact precision and some funds may not be transferred as expected.

```
function DistributeDevsFunds()public returns(bool success){
    require(msg.sender == TimelockedDevswallett);
    require(balanceOf(TimelockedDevswallett) == LOCKEDFUNDSDEVS);
    uint singleDevAmount = LOCKEDFUNDSDEVS / 3 ;
    transferNoTax(msg.sender, dev1, singleDevAmount);
    transferNoTax(msg.sender, dev2, singleDevAmount);
    transferNoTax(msg.sender, dev3, singleDevAmount);

    LOCKEDFUNDSDEVS = 0;
    return true;
}
```

### Recommendation

The contract could send the subtraction of the distributed funds in the last transfer in order to avoid the deviation rounding issue. For instance, the contract could calculate the last amount using a formula similar to: `transferNoTax(msg.sender, dev3, LOCKEDFUNDSDEVS - (singleDevAmount + singleDevAmount));`

## RRAC - Redundant Role Access Check

Criticality	minor / informative
Location	contract.sol#L217
Status	Unresolved

### Description

The `isOwner` modifier checks if the caller is the contract owner role. The statement `require(msg.sender == owner)` also performs the same check. As a result, the check is performed twice.

```
function ChangeNoTaxAddress(address newWallet) public isOwner returns(bool) {  
    require(msg.sender == owner, "you have to be the owner to change the no  
tax address");  
    noTaxWallet = newWallet;  
  
    return true;  
}
```

### Recommendation

The contract could remove one of the two role access checks.

## L01 - Public Function could be Declared External

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L144,330,168,326,263,118,234,278,188,206,154,254,283,247,318,110,133,273,213,226,268,314,197,288,322,304
<b>Status</b>	Unresolved

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
burn
currentTxFee
DistributeDevsFunds
declaredFee
name
transfer
ChangeTx Fees
totalSupply
declareOwnerChange
...
```

### Recommendation

Use the external attribute for functions never called from the contract.

## L01 - Public Function could be Declared External

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L144,330,168,326,263,118,234,278,188,206,154,254,283,247,318,110,133,273,213,226,268,314,197,288,322,304
<b>Status</b>	Unresolved

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
burn
currentTxFee
DistributeDevsFunds
declaredFee
name
transfer
ChangeTx Fees
totalSupply
declareOwnerChange
...
```

### Recommendation

Use the external attribute for functions never called from the contract.

## L02 - State Variables could be Declared Constant

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L14,25,23,16,24,26,15,20,22,13,21
<b>Status</b>	Unresolved

### Description

Constant state variables should be declared constant to save gas.

```
_symbol  
dev2  
stakingWallet  
_MAXTXFEE  
dev1  
dev3  
_decimals  
marketingWallet  
timelockedTokensWallet  
...
```

### Recommendation

Add the constant attribute to state variables that never change.

## L04 - Conformance to Solidity Naming Conventions

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L213,288,21,309,33,154,30,144,168,234,16
<b>Status</b>	Unresolved

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
ChangeNoTaxAddress
WarningTime
TimelockedDevswallett
Address
RequiredeDaysBeforeChange
_from
LOCKEDFUNDSDEVS
_value
DistributeDevsFunds
...
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>.

## L05 - Unused State Variable

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L15
<b>Status</b>	Unresolved

### Description

There are segments that contain unused state variables.

```
_decimals
```

### Recommendation

Remove unused state variables.

## L07 - Missing Events Arithmetic

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L247,226
<b>Status</b>	Unresolved

### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_declaredWarningTime = newWarningTime  
_declaredFee = newTxFee
```

### Recommendation

Emit an event for critical parameter changes.

## L09 - Dead Code Elimination

<b>Criticality</b>	minor / informative
<b>Location</b>	contract.sol#L414
<b>Status</b>	Unresolved

### Description

Functions that are not used in the contract, and make the code's size bigger.

```
transferToHolder
```

### Recommendation

Remove unused functions.

## Summary

Bitscrow is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a limit of max 5% fees.

The contract implements a feature that warns the users about changes in the fees and in ownership. The contract initially states that in x period the change will be performed. If the x period is set to zero, then the feature will essentially be disabled.

# About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
