## MT - Mints Tokens

Criticality	critical
Location	contract.sol#L41
Status	Unresolved

## Description

The contract owner has the ability to mint tokens after 14th November 2022. The owner may take advantage of it by calling the `mint` function. As a result, the contract tokens will be highly inflated.

There is a maximum mint limit number. The contract owner can mint up to 150000000000000000000000 tokens. That is ~10% more than the initial total supply.

```
function mint(address _account, uint256 _amount) external onlyGovernor {
    require(mintLockTime < block.timestamp, "mint is locked");

    uint256 _totalSupply = totalSupply();
    require(
        _totalSupply.add(_amount) <= totalSupplyLimit,
        "We are reached the limit in the total supply"
    );

    _mint(_account, _amount);
}
```

## Recommendation

The owner should carefully manage the credentials of the owner's account. We advised considering an extra-strong security mechanism that the actions may be quarantined by many users instead of one. The owner could also renounce the contract ownership for a period of time or pass the access to the zero address.

# Contract Diagnostics

● Critical   ● Medium   ● Minor / Informative

Severity	Code	Description	Status
●	L04	Conformance to Solidity Naming Conventions	Unresolved
●	L15	Local Scope Variable Shadowing	Unresolved

## L04 - Conformance to Solidity Naming Conventions

<b>Criticality</b>	minor / informative
<b>Location</b>	contracts/MoonappToken.sol#L36,41
<b>Status</b>	Unresolved

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_mintLockTime  
_account  
_amount
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>.

## L15 - Local Scope Variable Shadowing

<b>Criticality</b>	minor / informative
<b>Location</b>	contracts/MoonappToken.sol#L44
<b>Status</b>	Unresolved

### Description

There are variables that are defined in the local scope containing the same name from an upper scope.

```
_totalSupply
```

### Recommendation

The local variables should have different names from the upper scoped variables.

The domain was created 8 months before the creation of the audit. It will expire in 4 months.

There is no public billing information, the creator is protected by the privacy settings.

## Summary

There is a function that can be abused by the owner to mint tokens. If the contract owner abuses the mint functionality, the contract will be highly inflated. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

# About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
