Audit Updates

Initial Audit	6th December 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor / Informative ● Pass

Severity	Code	Description	Status
●	ST	Stops Transactions	Unresolved
●	OCTD	Transfers Contract's Tokens	Passed
●	OTUT	Transfers User's Tokens	Passed
●	ELFM	Exceeds Fees Limit	Passed
●	ULTW	Transfers Liquidity to Team Wallet	Passed
●	MT	Mints Tokens	Passed
●	BT	Burns Tokens	Passed
●	BC	Blacklists Addresses	Unresolved

ST - Stops Transactions

Criticality	critical
Location	contract.sol#L1142,1173
Status	Unresolved

Description

Users can be taxed up to 100% or prevented from sale if they sell during the first day of their purchase.

```
if (!isBuy && enableEarlySellTax) {
    if (_holderFirstBuyTimestamp[from] != 0 && (_holderFirstBuyTimestamp[from]
+ (24 hours) >= block.timestamp)) {
        sellLiquidityFee = earlySellLiquidityFee;
        sellMarketingFee = earlySellMarketingFee;
        sellDevFee = earlySellDevFee;
        sellTotalFees = sellMarketingFee + sellLiquidityFee + sellDevFee;
    } else {
        sellLiquidityFee = 2;
        sellMarketingFee = 0;
        sellDevFee = 3;
        sellTotalFees = sellMarketingFee + sellLiquidityFee + sellDevFee;
    }
}
```

The contract owner can limit the transactions to one per block. Once disabled, it cannot be reenabled.

```
require(_holderLastTransferTimestamp[tx.origin] < block.number, "_transfer::  
Transfer Delay enabled. Only one purchase per block allowed.");
```

Recommendation

The contract should remove the last transfer check, as it may cause a transaction to fail. Additionally, the contract could embody a check for not allowing setting the early sell taxes more than the allowed limit of 25%.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklists Addresses

Criticality	medium
Location	contract.sol#L1081
Status	Unresolved

Description

The contract owner has the authority to stop addresses from transactions. The owner may take advantage of it by calling the `ManageBot` function.

```
function ManageBot (address account, bool isBlacklisted) private onlyOwner {  
    _blacklist[account] = isBlacklisted;  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor / Informative

Severity	Code	Description	Status
●	PTRP	Potential Transfer Revert Propagation	Unresolved
●	RSML	Redundant SafeMath Library	Unresolved
●	BLC	Business Logic Concern	Unresolved
●	L04	Conformance to Solidity Naming Conventions	Unresolved
●	L05	Unused State Variable	Unresolved
●	L07	Missing Events Arithmetic	Unresolved
●	L09	Dead Code Elimination	Unresolved
●	L13	Divide before Multiply Operation	Unresolved
●	L15	Local Scope Variable Shadowing	Unresolved

PTRP - Potential Transfer Revert Propagation

Criticality	minor / informative
Location	contract.sol#L1318,1325
Status	Unresolved

Description

The contract sends funds to a marketingWallet and a devWallet as part of the transfer flow. These addresses can either be a wallet address or a contract. If the address is a contract then it may revert from incoming payment. As a result, the error will propagate to the token's contract and revert the transfer.

```
(success,) = address(devWallet).call{value: ethForDev}("");  
...  
(success,) = address(marketingWallet).call{value: address(this).balance}("");
```

Recommendation

The contract should tolerate the potential revert from the underlying contracts when the interaction is part of the main transfer flow. This could be achieved by not allowing set contract addresses or by sending the funds in a non-revertable way.

RSML - Redundant SafeMath Library

Criticality	minor / informative
Location	contract.sol#L459
Status	Unresolved

Description

The Solidity versions that are greater than or equal to 0.8.0 do not need the use of SafeMath Library. The usage of the SafeMath library produces unnecessary additional gas.

```
library SafeMath {  
  ...  
}
```

Recommendation

The team is advised to remove the SafeMath library as it is safe to do math operations without it.

ROA - Redundant Owner Approval

Criticality	minor / informative
Location	contract.sol#L1332
Status	Unresolved

Description

Approving the owner is redundant.

```
_approve(owner(), owner(), totalSupply());
```

Recommendation

The team is advised to remove this check, as there is no reason to approve the owner.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contract.sol#L927,1065,1328,38,54,1081,37,929,1057,915,727
Status	Unresolved

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
marketingWalletUpdated
_earlySellDevFee
_devFee
Send
PERMIT_TYPEHASH
MINIMUM_LIQUIDITY
_liquidityFee
ManageBot
_earlySellMarketingFee
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.8.17/style-guide.html#naming-conventions>.

L05 - Unused State Variable

Criticality	minor / informative
Location	contract.sol#L658
Status	Unresolved

Description

There are segments that contain unused state variables.

```
MAX_INT256
```

Recommendation

Remove unused state variables.

L07 - Missing Events Arithmetic

Criticality	minor / informative
Location	contract.sol#L1031,1038,1057,1065,1043
Status	Unresolved

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
swapTokensAtAmount = newAmount  
maxTransactionAmount = newNum * (10 ** 18)  
buyMarketingFee = _marketingFee  
sellMarketingFee = _marketingFee  
maxWallet = newNum * (10 ** 18)
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor / informative
Location	contract.sol#L704,717,1081,403,710
Status	Unresolved

Description

Functions that are not used in the contract, and make the code's size bigger.

```
abs  
toInt256Safe  
ManageBot  
_burn  
toUint256Safe
```

Recommendation

Remove unused functions.

L13 - Divide before Multiply Operation

Criticality	minor / informative
Location	contract.sol#L1114
Status	Unresolved

Description

Performing divisions before multiplications may cause lose of prediction.

```
fees = amount.mul(buyTotalFees).div(100)
tokensForMarketing += fees * sellMarketingFee / sellTotalFees
fees = amount.mul(sellTotalFees).div(100)
tokensForDev += fees * sellDevFee / sellTotalFees
```

Recommendation

The multiplications should be prior to the divisions.

L15 - Local Scope Variable Shadowing

Criticality	minor / informative
Location	contract.sol#L964
Status	Unresolved

Description

There are variables that are defined in the local scope containing the same name from an upper scope.

```
totalSupply
```

Recommendation

The local variables should have different names from the upper scoped variables.

Summary

There are some functions that can be abused by the owner like stopping transactions and blacklisting addresses. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

Disclaimer

The information provided in this report does not constitute investment, financial or trading advice and you should not treat any of the document's content as such. This report may not be transmitted, disclosed, referred to or relied upon by any person for any purposes nor may copies be delivered to any other person other than the Company without Cyberscope's prior written consent. This report is not nor should be considered an "endorsement" or "disapproval" of any particular project or team. This report is not nor should be regarded as an indication of the economics or value of any "product" or "asset" created by any team or project that contracts Cyberscope to perform a security assessment. This document does not provide any warranty or guarantee regarding the absolute bug-free nature of the technology analyzed, nor do they provide any indication of the technologies proprietors' business, business model or legal compliance. This report should not be used in any way to make decisions around investment or involvement with any particular project. This report represents an extensive assessment process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology.

Blockchain technology and cryptographic assets present a high level of ongoing risk. Cyberscope's position is that each company and individual are responsible for their own due diligence and continuous security. Cyberscope's goal is to help reduce the attack vectors and the high level of variance associated with utilizing new and consistently changing technologies and in no way claims any guarantee of security or functionality of the technology we agree to analyze. The assessment services provided by Cyberscope are subject to dependencies and are under continuing development. You agree that your access and/or use including but not limited to any services reports and materials will be at your sole risk on an as-is where-is and as-available basis. Cryptographic tokens are emergent technologies and carry with them high levels of technical risk and uncertainty. The assessment reports could include false positives, false negatives and other unpredictable results. The services may access and depend upon multiple layers of third parties.

About Cyberscope

Cyberscope is a blockchain cybersecurity company that was founded with the vision to make web3.0 a safer place for investors and developers. Since its launch, it has worked with thousands of projects and is estimated to have secured tens of millions of investors' funds.

Cyberscope is one of the leading smart contract audit firms in the crypto space and has built a high-profile network of clients and partners.
