Contract Review

Contract Name	Cryptosyno
Compiler Version	v0.8.13+commit.abaa5c0e
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/token/0xeB3262Dc084b7A8ebf41DE9EDd32B7686f9a3100
Symbol	CSYN
Decimals	18
Total Supply	7,777,777
Domain	cryptosyno.io

Source Files

Filename	SHA256
contract.sol	a5fd359b6804fb99b74e8d4b61088500417aef6212dfcf8473eaab2bc1542b5f

Audit Updates

Initial Audit	27th April 2022
Corrected	20th May 2022

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L07	Missing Events Arithmetic
●	L09	Dead Code Elimination
●	L13	Divide before Multiply Operation

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L251,259,429,433,437,441,445,455,464,473,482,499,512,531,536,541,550,555,567,614,628,636,644

Description

Public functions that are never called by the contract should be declared external to save gas.

```
setMaxTransferringAmount  
includeOrExcludeFrommaxTransferLimit  
includeOrExcludeFromFee  
excludeFromReward  
reflectionFromToken  
deliver  
totalHolderDistribution  
isExcludedFrommaxTransferLimit  
isExcludedFromFee  
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contract.sol#L358,356,357,352,363,387,382,366,385,380,386,381

Description

Constant state variables should be declared constant to save gas.

```
slotMachineFeeOnSelling
slotMachineFee
redistributionFeeOnSelling
redistributionFee
maxFee
burnFeeOnSelling
burnFee
burnAddress
_tTotal
...
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L155,445,531,536,541,601,614,628,636,644,651,652,667,672,677,685,351

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
percentDivider
_pair
_router
_newAddress
_state
_value
BuyFee
_percentage
_address
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L07 - Missing Events Arithmetic

Criticality

minor

Location

contract.sol#L644

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
maxTransferringAmount = _tTotal.mul(_percentage).div(percentDivider)
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality

minor

Location

contract.sol#L1003,983

Description

Functions that are not used in the contract, and make the code's size bigger.

```
swapTokensForEth  
addLiquidity
```

Recommendation

Remove unused functions.

L13 - Divide before Multiply Operation

Criticality

minor

Location

contract.sol#L934,971

Description

Performing divisions before multiplications may cause lose of prediction.

```
tFee = tAmount.mul(_currentRedistributionFee).div(percentDivider)
tFeeburn = tAmount.mul((_currentburnFee)).div(percentDivider)
tFeeslot = tAmount.mul((_currentslotMachineFee)).div(percentDivider)
```

Recommendation

The multiplications should be prior to the divisions.

Summary

CryptoSyno is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. The fees are fixed to 1% for buys and 5% for sales.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
