Introduction

The contract PrivateSale implements a mechanism for buying MGB tokens. During the buy process, the PrivateSale contract provides referral functionality with a reward system. The rewards are transferred directly to the referees on every buy. Users can buy MGB tokens providing either native or some predefined tokens.

Contract Diagnostics

● Critical ● Medium ● Minor / Informative

Severity	Code	Description	Status
●	RRD	Recursive Referral Distribution	Unresolved
●	L04	Conformance to Solidity Naming Conventions	Unresolved
●	L13	Divide before Multiply Operation	Unresolved
●	L14	Uninitialized Variables in Local Scope	Unresolved

RRD - Recursive Referral Distribution

Criticality	minor
Location	contracts/ReferralSystem.sol#L57
Status	Unresolved

Description

The distribution system is proceeding the next address similarly to a graph. The first referred node is taking the corresponding amount and then it refers to the next address. That means that if address A refers to address B, then address B can share the entire distributed amount with address A by referring to address A and creating a recursion between address A and address B.

```
Address A -> Address B -> Address A -> Address B -> ... ->
_percentReward.length recursion length
```

Recommendation

The distribution system should not allow recursions between referrals.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contracts/AbstractSaleRound.sol#L45,39,40,36 contracts/ReferralSystem.sol#L15,18,16 contracts/Whitelist.sol#L8
Status	Unresolved

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_stablecoin  
_percentReward  
_referralList  
_receiveMATIC  
_allReferralPercent  
_receiveUSD  
_MGBAddress  
_whiteList
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>.

L13 - Divide before Multiply Operation

Criticality	minor / informative
Location	contracts/AbstractSaleRound.sol#L357
Status	Unresolved

Description

Performing divisions before multiplications may cause lose of prediction.

```
month = (block.timestamp - _tokenGenerationEvent) / _periodDuration
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor / informative
Location	contracts/ReferralSystem.sol#L74,45 contracts/Whitelist.sol#L31 contracts/AbstractSaleRound.sol#L407,94
Status	Unresolved

Description

These are variables that are defined in the local scope and are not initialized.

```
i
```

Recommendation

All the local scoped variables should be initialized.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
