## Review

Contract Name	GODFATHER
Compiler Version	v0.8.17+commit.8df45f5f
Optimization	200 runs
Explorer	<a href="https://etherscan.io/address/0xd6e64961ba13ba42858ad8a74ed9a9b051a4957d">https://etherscan.io/address/0xd6e64961ba13ba42858ad8a74ed9a9b051a4957d</a>
Address	0xd6e64961ba13ba42858ad8a74ed9a9b051a4957d
Network	ETH
Symbol	\$GOD
Decimals	9
Total Supply	69,000,000

## Audit Updates

Initial Audit	28 Jun 2023
Corrected Phase 2	01 Jul 2023

## Source Files

Filename	SHA256
GODFATHER.sol	95aac550fa68b8fc8eeb01a39176aaeb8356c6b775cd908d1f25097ff0e2214a

## Findings Breakdown

Critical	1
Medium	0
Minor / Informative	3

Severity	Unresolved	Acknowledged	Resolved	Other
Critical	1	0	0	0
Medium	0	0	0	0
Minor / Informative	3	0	0	0

## ST - Stops Transactions

<b>Criticality</b>	Critical
<b>Location</b>	contracts/GODFATHER.sol#L287
<b>Status</b>	Unresolved

### Description

The transactions are initially disabled for all users excluding the authorized addresses. The owner can enable the transactions for all users. Once the transactions are enable the owner will not be able to disable them again.

```
require(tradingEnabled || !_isExcludedFromFees[from] ||  
_isExcludedFrom[to], "Trading not yet enabled!");
```

### Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. Some suggestions are:

- Introduce a multi-sign wallet so that many addresses will confirm the action.
- Introduce a governance model where users will vote about the actions.

## IDI - Immutable Declaration Improvement

<b>Criticality</b>	Minor / Informative
<b>Location</b>	contracts/GODFATHER.sol#L247
<b>Status</b>	Unresolved

### Description

The contract declares state variables that their value is initialized once in the constructor and are not modified afterwards. The `immutable` is a special declaration for this kind of state variables that saves gas when it is defined.

```
creator
```

### Recommendation

By declaring a variable as immutable, the Solidity compiler is able to make certain optimizations. This can reduce the amount of storage and computation required by the contract, and make it more gas-efficient.

## L09 - Dead Code Elimination

Criticality	Minor / Informative
Location	contracts/GODFATHER.sol#L196
Status	Unresolved

### Description

In Solidity, dead code is code that is written in the contract, but is never executed or reached during normal contract execution. Dead code can occur for a variety of reasons, such as:

- Conditional statements that are always false.
- Functions that are never called.
- Unreachable code (e.g., code that follows a return statement).

Dead code can make a contract more difficult to understand and maintain, and can also increase the size of the contract and the cost of deploying and interacting with it.

```
function _burn(address account, uint256 amount) internal
virtual {
    require(account != address(0), "ERC20: burn from the
zero address");

    _beforeTokenTransfer(account, address(0), amount);

    uint256 accountBalance = _balances[account];
    ...
}
_totalSupply -= amount;

emit Transfer(account, address(0), amount);

_afterTokenTransfer(account, address(0), amount);
}
```

## Recommendation

To avoid creating dead code, it's important to carefully consider the logic and flow of the contract and to remove any code that is not needed or that is never executed. This can help improve the clarity and efficiency of the contract.

## L20 - Succeeded Transfer Check

Criticality	Minor / Informative
Location	contracts/GODFATHER.sol#L265
Status	Unresolved

### Description

According to the ERC20 specification, the transfer methods should be checked if the result is successful. Otherwise, the contract may wrongly assume that the transfer has been established.

```
ERC20token.transfer(msg.sender, balance)
```

### Recommendation

The contract should check if the result of the transfer methods is successful. The team is advised to check the SafeERC20 library from the [Openzeppelin library](#).

# Functions Analysis

Contract	Type	Bases		
	Function Name	Visibility	Mutability	Modifiers
<b>IERC20</b>	Interface			
	totalSupply	External		-
	balanceOf	External		-
	transfer	External	✓	-
	allowance	External		-
	approve	External	✓	-
	transferFrom	External	✓	-
<b>IERC20Metadata</b>	Interface	IERC20		
	name	External		-
	symbol	External		-
	decimals	External		-
<b>Address</b>	Library			
	sendValue	Internal	✓	
<b>Context</b>	Implementation			
	_msgSender	Internal		

	_msgData	Internal		
<b>Ownable</b>	Implementation	Context		
		Public	✓	-
	owner	Public		-
	renounceOwnership	Public	✓	onlyOwner

	approve	Public	✓	-
	transferFrom	Public	✓	-
	increaseAllowance	Public	✓	-
	decreaseAllowance	Public	✓	-
	_transfer	Internal	✓	

	_mint	Internal	✓	
	_burn	Internal	✓	
	_approve	Internal	✓	
	_beforeTokenTransfer	Internal	✓	
	_afterTokenTransfer	Internal	✓	
<b>GODFATHER</b>	Implementation	ERC20, Ownable		
		Public	✓	ERC20
		External	Payable	-
	claimStuckTokens	External	✓	onlyOwner
	excludeFromFees	External	✓	onlyOwner
	isExcludedFromFees	Public		-
	enableTrading	External	✓	onlyOwner
	_transfer	Internal	✓	

## Inheritance Graph

The diagram illustrates the call graph for the ERC20 contract, showing the flow of calls between different components and functions. The components are organized into boxes, and the flow is indicated by colored arrows.

**Legend:**

- Internal Call (Green arrow)
- External Call (Orange arrow)
- Defined Contract (Grey box)
- Undefined Contract (White box)

**ERC20 (ifc):**

- Context:**
  - \_msgSender
  - \_msgData
- Address (lib):**
  - sendValue
- IERC20Metadata (ifc):**
  - name
  - symbol
  - decimals
- ERC20:**
  - <Constructor>
  - name
  - symbol
  - decimals
  - totalSupply
  - balanceOf
  - transferFrom
  - allowance
  - transfer
  - increaseAllowance
  - decreaseAllowance
  - approve
  - \_burn
  - type
  - \_transfer
  - \_msgSender
  - \_mint
  - \_approve
  - \_beforeTokenTransfer
  - \_afterTokenTransfer

**Ownable:**

- onlyOwner
- owner
- <Constructor>
- renounceOwnership
- transferOwnership
- \_transfer
- \_msgSender

**GODFATHER:**

- <Constructor>
- <Receive Ether>
- claimStuckTokens
- excludeFromFees
- isExcludedFromFees
- enableTrading
- \_transfer
- decimals
- payable

**IERC20 (ifc):**

- totalSupply
- balanceOf
- transfer
- allowance
- approve
- transferFrom

**Flow:**

- ERC20 to Ownable:**
  - ERC20.\_transfer calls Ownable.\_transfer.
  - Ownable.\_transfer calls ERC20.\_transfer.
  - Ownable.\_transfer calls ERC20.\_msgSender.
  - Ownable.\_transfer calls ERC20.\_approve.
  - Ownable.\_transfer calls ERC20.\_mint.
  - Ownable.\_transfer calls ERC20.\_burn.
  - Ownable.\_transfer calls ERC20.\_beforeTokenTransfer.
  - Ownable.\_transfer calls ERC20.\_afterTokenTransfer.
- Ownable to GODFATHER:**
  - Ownable.\_transfer calls GODFATHER.\_transfer.
  - Ownable.\_transfer calls GODFATHER.decimals.
  - Ownable.\_transfer calls GODFATHER.payable.
- GODFATHER to IERC20 (ifc):**
  - GODFATHER.\_transfer calls IERC20 (ifc).transfer.
  - GODFATHER.decimals calls IERC20 (ifc).decimals.
  - GODFATHER.payable calls IERC20 (ifc).payable.

## Summary

Godfather contract implements a token mechanism. This audit investigates security issues, business logic concerns and potential improvements. There are some functions that can be abused by the owner like stop transactions. A multi-wallet signing pattern will provide security against potential hacks.

## Disclaimer

The information provided in this report does not constitute investment, financial or trading advice and you should not treat any of the document's content as such. This report may not be transmitted, disclosed, referred to or relied upon by any person for any purposes nor may copies be delivered to any other person other than the Company without Cyberscope's prior written consent. This report is not nor should be considered an "endorsement" or "disapproval" of any particular project or team. This report is not nor should be regarded as an indication of the economics or value of any "product" or "asset" created by any team or project that contracts Cyberscope to perform a security assessment. This document does not provide any warranty or guarantee regarding the absolute bug-free nature of the technology analyzed, nor do they provide any indication of the technologies proprietors' business, business model or legal compliance. This report should not be used in any way to make decisions around investment or involvement with any particular project. This report represents an extensive assessment process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology.

Blockchain technology and cryptographic assets present a high level of ongoing risk. Cyberscope's position is that each company and individual are responsible for their own due diligence and continuous security. Cyberscope's goal is to help reduce the attack vectors and the high level of variance associated with utilizing new and consistently changing technologies and in no way claims any guarantee of security or functionality of the technology we agree to analyze. The assessment services provided by Cyberscope are subject to dependencies and are under continuing development. You agree that your access and/or use including but not limited to any services reports and materials will be at your sole risk on an as-is where-is and as-available basis. Cryptographic tokens are emergent technologies and carry with them high levels of technical risk and uncertainty. The assessment reports could include false positives, false negatives and other unpredictable results. The services may access and depend upon multiple layers of third parties.

## About Cyberscope

Cyberscope is a blockchain cybersecurity company that was founded with the vision to make web3.0 a safer place for investors and developers. Since its launch, it has worked with thousands of projects and is estimated to have secured tens of millions of investors' funds.

Cyberscope is one of the leading smart contract audit firms in the crypto space and has built a high-profile network of clients and partners.
