Domain	quarashi.network

Audit Updates

Initial Audit	25th February 2022
Corrected	25th February 2022

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ST - Stop Transactions

Criticality	medium
Location	contract.sol#L699

Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the `paused` to true.

```
function transfer(address _to, uint256 _value) public returns (bool
_success) {
    require(!paused || msg.sender == owner);
    return super.transfer(_to, _value);
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Freeze Functionality

The contract supports a feature called “Freeze”. Users can send an amount of tokens to an address and choose when these tokens will be available. Essentially, the recipient will have the tokens but will not be able to use them until the time period elapses.

According to the contract’s configuration, the *canMint* modifier locks during the contract initialization. That means that the *mintAndFreeze* function is redundant since it can never be called.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L04	Conformance to Solidity Naming Conventions
●	L09	Dead Code Elimination

L01 - Public Function could be Declared External

Criticality

minor

Location

contract.sol#L98,134,140,229,252,308,317,362,382,415 and 11 more

Description

Public functions that are never called by the contract should be declared external to save gas.

```
decimals  
symbol  
name  
mintAndFreeze  
unpause  
pause  
burn  
releaseAll  
freezeTo  
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L04 - Conformance to Solidity Naming Conventions

Criticality

minor

Location

contract.sol#L107,122,168,169,170,196,209,210,230,231 and 27 more

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_value  
_to  
_from  
_until  
_amount  
_index  
_addr  
_owner  
_newOwner  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L09 - Dead Code Elimination

Criticality

minor

Location

contract.sol#L57,41

Description

Functions that are not used in the contract, and make the code's size bigger.

```
mul  
div
```

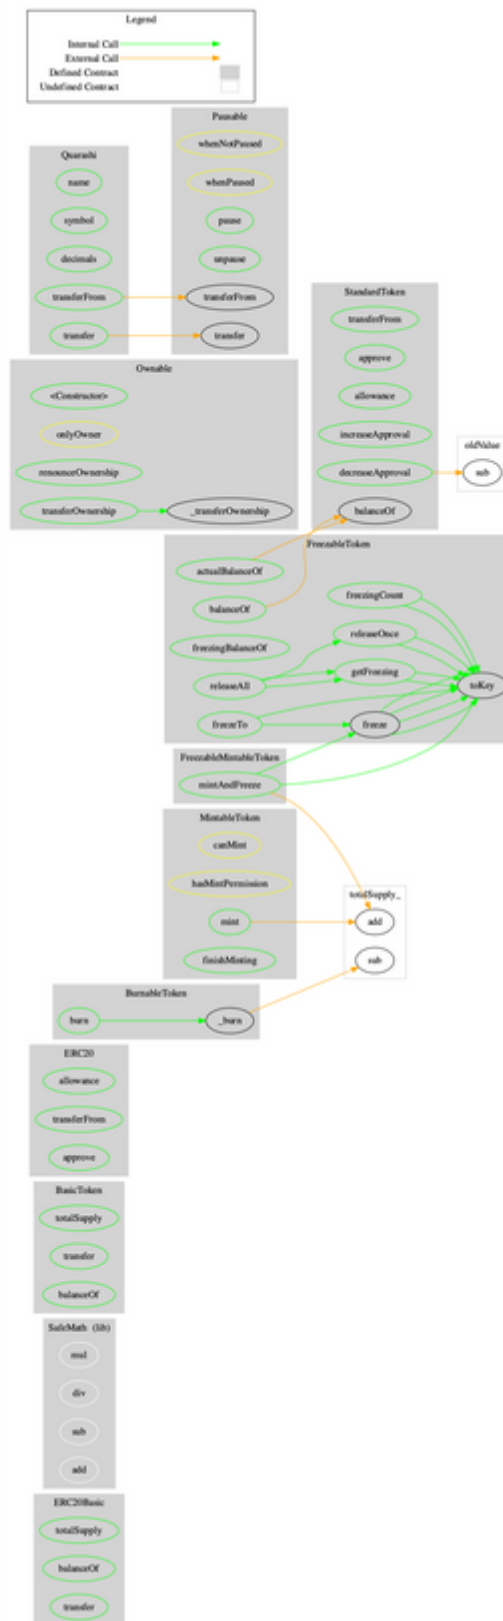

Recommendation

Remove unused functions.

Contract Functions

Contract	Type	Bases		
	Function Name	Visibility	Mutability	Modifiers
FreezableMintableToken	Implementation	FreezableToken, MintableToken

The domain has been created about 1 year before the creation of the audit. It will expire in 12 months.

There is no public billing information, the creator is protected by the privacy settings.

Summary

The Smart Contract analysis reported no compiler errors and only 1 medium threat issue. The contract Owner can pause transactions. Additionally, the contract contains some extra features like transfer and time-lock tokens. These functions can be called by the users. There are also some unused declared variables `CONTINUE_MINTING`, `START_TIME` and `TARGET_USER`. The contract contains mint functionality but it cannot be used since the mint permissions have been renounced. The audit describes these features and notes some minor recommendations. A multi-wallet signing pattern will provide security against potential hacks.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Cyberscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
