Contract Review

Contract Name	Diferencial
Compiler Version	v0.8.14+commit.80d49f37
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/token/0x027CF94720849C86e1f6A301aC610CBF4324f90A
Symbol	DRL
Decimals	9
Total Supply	100,000,000,000,000,000
Domain	diferencialtoken.com

Source Files

Filename	SHA256
contract.sol	5d292d02f5e1536fe87cf94e31783ea47d98d2ea5de0911bce1f6d357c5e4fd6

Audit Updates

Initial Audit	6th June 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L07	Missing Events Arithmetic
●	L11	Unnecessary Boolean equality
●	L12	Using Variables before Declaration
●	L13	Divide before Multiply Operation
●	L14	Uninitialized Variables in Local Scope

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L293,298,311,324,386,414,435,439,615,625,653

Description

Public functions that are never called by the contract should be declared external to save gas.

```
isExcludedFromReward  
enableTrading  
getCirculatingSupply  
getMaxWallet  
getMaxTX  
setRatios  
isBlacklisted  
setNewRouter  
approveContractContingency  
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contract.sol#L127,197

Description

Constant state variables should be declared constant to save gas.

```
totalReflections  
_tTotal
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L33,394,121,123,124,125,129,146,152,161,162,163,164,165,176,192

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_hasLiqBeenAdded  
_taxWallets  
masterTaxDivisor  
maxRoundtripTax  
maxTransferTaxes  
maxSellTaxes  
maxBuyTaxes  
_ratios  
_taxRates  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L425,430,443,449,484

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
burnLimit = (_tTotal * percent) / divisor
piSwapPercent = priceImpactSwapPercent
swapThreshold = (_tTotal * thresholdPercent) / thresholdDivisor
_maxWalletSize = (_tTotal * percent) / divisor
_maxTxAmount = (_tTotal * percent) / divisor
```

Recommendation

Emit an event for critical parameter changes.

L11 - Unnecessary Boolean equality

Criticality

minor

Location

contract.sol#L337

Description

The comparison to boolean constants is redundant. Boolean constants can be used directly and do not need to be compared to true or false.

```
enabled == false
```

Recommendation

Remove the equality to the boolean constant.

L12 - Using Variables before Declaration

Criticality

minor

Location

contract.sol#L754

Description

The contract is using a variable before the declaration. This is usually happening either if it has not been declared yet or the variable has been declared in a different scope.

check

Recommendation

The variables should be declared before any usage of them.

L13 - Divide before Multiply Operation

Criticality

minor

Location

contract.sol#L548,745

Description

Performing divisions before multiplications may cause lose of prediction.

```
feeAmount = (tAmount * currentFee) / masterTaxDivisor  
toLiquify = ((contractTokenBalance * ratios.liquidity) / ratios.totalSwap) / 2
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality

minor

Location

contract.sol#L753,746,754

Description

There are variables that are defined in the local scope and are not initialized.

```
check  
values  
checked
```

Recommendation

All the local scoped variables should be initialized.

Summary

Diferencial is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
