Audit Updates

Initial Audit	3rd October 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor / Informative ● Pass

Severity	Code	Description	Status
●	ST	Stops Transactions	Passed
●	OCTD	Transfers Contract's Tokens	Passed
●	OTUT	Transfers User's Tokens	Passed
●	ELFM	Exceeds Fees Limit	Passed
●	ULTW	Transfers Liquidity to Team Wallet	Unresolved
●	MT	Mints Tokens	Passed
●	BT	Burns Tokens	Passed
●	BC	Blacklists Addresses	Unresolved

ULTW - Transfers Liquidity to Team Wallet

Criticality	minor / informative
Location	contract.sol#L919
Status	Unresolved

Description

The contract owner has the authority to transfer funds without limit to the team wallet. These funds have been accumulated from fees collected from the contract. The owner may take advantage of it by calling the `withdrawAllToTreasury` methods.

```
function withdrawAllToTreasury() external swapping onlyOwner {  
  
    uint256 amountToSwap = _gonBalances[address(this)].div(_gonsPerFragment);  
    require( amountToSwap > 0,"There is no GREENSPACE token deposited in token contract");  
    address[] memory path = new address[](2);  
    path[0] = address(this);  
    path[1] = router.WETH();  
    router.swapExactTokensForETHSupportingFeeOnTransferTokens(  
        amountToSwap,  
        0,  
        path,  
        treasuryReceiver,  
        block.timestamp  
    );  
}
```

Recommendation

The contract could embody a check for the maximum amount of funds that can be swapped. Since a huge amount may volatile the token's price.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklists Addresses

Criticality	minor
Location	contract.sol#L1103
Status	Unresolved

Description

The contract owner has the authority to stop only contracts from transactions. The owner may take advantage of it by calling the `setBotBlacklist` function.

```
function setBotBlacklist(address _botAddress, bool _flag) external onlyOwner {  
    require(isContract(_botAddress), "only contract address, not allowed externally owned  
account");  
    blacklist[_botAddress] = _flag;  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor / Informative

Severity	Code	Description	Status
●	BLC	Business Logic Concern	Unresolved
●	MTS	Manipulate Total Supply	Unresolved
●	L01	Public Function could be Declared External	Unresolved
●	L02	State Variables could be Declared Constant	Unresolved
●	L04	Conformance to Solidity Naming Conventions	Unresolved
●	L05	Unused State Variable	Unresolved
●	L07	Missing Events Arithmetic	Unresolved
●	L09	Dead Code Elimination	Unresolved
●	L13	Divide before Multiply Operation	Unresolved
●	L14	Uninitialized Variables in Local Scope	Unresolved

BLC - Business Logic Concern

Criticality	medium
Location	contract.sol#L703,1079
Status	Unresolved

Description

An unsigned integer can either be greater or less than a number (385 days). As a result, the rest conditions will never executed.

```
if (deltaTimeFromInit < (385 days)) {  
    rebaseRate = 450;  
} else if (deltaTimeFromInit >= (385 days)) {  
    rebaseRate = 120;  
} else if (deltaTimeFromInit >= ((15 * 365 days) / 10)) {  
    rebaseRate = 12;  
} else if (deltaTimeFromInit >= (7 * 365 days)) {  
    rebaseRate = 6;  
}
```

The autofirePit usually refers to a burn mechanism. The contract owner has the authority to change the address of the autofirePit. As a result, the autofirePit fee will not be transferred to the dead address.

```
function setFeeReceivers(  
    address _autoLiquidityReceiver,  
    address _treasuryReceiver,  
    address _autofirePit  
) external onlyOwner {  
    autoLiquidityReceiver = _autoLiquidityReceiver;  
    treasuryReceiver = _treasuryReceiver;  
    autofirePit = _autofirePit;  
}
```

Recommendation

The contract should remove the branch logic that will never be executed.

The autofirePit address should not be able to change.

MTS - Manipulate Total Supply

Criticality	minor / informative
Location	contract.sol#L694
Status	Unresolved

Description

Owner is able to manipulate total supply. This change will have a direct impact on the token price and Market Cap.

```
function rebase() internal {  
    //..  
  
    for (uint256 i = 0; i < times; i++) {  
        _totalSupply = _totalSupply  
            .mul((10**RATE_DECIMALS).add(rebaseRate))  
            .div(10**RATE_DECIMALS);  
    }  
  
    _gonsPerFragment = TOTAL_GONS.div(_totalSupply);  
    _lastRebasedTime = _lastRebasedTime.add(times.mul(15 minutes));  
  
    pairContract.sync();  
  
    emit LogRebase(epoch, _totalSupply);  
}
```

Recommendation

The contract owner should carefully manage the adjustment of the circulating supply (increases or decreases), according to the token's price fluctuations.

L01 - Public Function could be Declared External

Criticality	minor / informative
Location	contract.sol#L571,567,563,532,519,537,1085
Status	Unresolved

Description

Public functions that are never called by the contract should be declared external to save gas.

```
decimals  
symbol  
name  
renounceOwnership  
owner  
transferOwnership  
getLiquidityBacking
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality	minor / informative
Location	contract.sol#L610,600,620,601,602,369,598,599,609,607
Status	Unresolved

Description

Constant state variables should be declared constant to save gas.

```
ZERO
GSDividendFee
swapEnabled
sellFee
autofirePitFee
dividendsPerShareAccuracyFactor
liquidityFee
treasuryFee
DEAD
...
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contract.sol#L637,609,1099,641,152,600,973,964,353,636,1051,189,1104,640,616,1077,1076,391,151,1078,169,1036,345,1095,639,610,584,638
Status	Unresolved

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_autoAddLiquidity  
DEAD  
_flag  
_totalSupply  
PERMIT_TYPEHASH  
GSDividendFee  
BUSD  
_autoRebase  
_minDistribution  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>.

L05 - Unused State Variable

Criticality	minor / informative
Location	contract.sol#L18
Status	Unresolved

Description

There are segments that contain unused state variables.

```
MAX_INT256
```

Recommendation

Remove unused state variables.

L07 - Missing Events Arithmetic

Criticality	minor / informative
Location	contract.sol#L391
Status	Unresolved

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
minPeriod = _minPeriod
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor / informative
Location	contract.sol#L46
Status	Unresolved

Description

Functions that are not used in the contract, and make the code's size bigger.

```
abs
```

Recommendation

Remove unused functions.

L13 - Divide before Multiply Operation

Criticality	minor / informative
Location	contract.sol#L690,804,1085
Status	Unresolved

Description

Performing divisions before multiplications may cause lose of prediction.

```
times = deltaTime.div(900)
_gonBalances[autofirePit] =
_gonBalances[autofirePit].add(gonAmount.div(feeDenominator).mul(autofirePitFee))
feeAmount = gonAmount.div(feeDenominator).mul(_totalFee)
_gonBalances[autoLiquidityReceiver] =
_gonBalances[autoLiquidityReceiver].add(gonAmount.div(feeDenominator).mul(liquidityFee))
liquidityBalance = _gonBalances[pair].div(_gonsPerFragment)
_gonBalances[address(this)] =
_gonBalances[address(this)].add(gonAmount.div(feeDenominator).mul(_treasuryFee.add(GSDivid
endFee)))
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor / informative
Location	contract.sol#L693
Status	Unresolved

Description

There are variables that are defined in the local scope and are not initialized.

```
rebaseRate
```

Recommendation

All the local scoped variables should be initialized.

There is no public billing information, the creator is protected by the privacy settings.

Summary

There are some functions that can be abused by the owner like transferring funds to the team's wallet and blacklisting addresses. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats. There is also a fixed fee of 16%.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.

The Cyberscope team
