Contract Review

Contract Name	MutantFroggo
Compiler Version	v0.8.11+commit.d7f03943
Optimization	0 runs
Explorer	https://testnet.bscscan.com/token/0xC0Dd86e3CE36A0d699750963bA9408833A7d3f81
Symbol	FROGGO
Decimals	9
Total Supply	4,000,000

Source Files

Filename	SHA256
contract.sol	113e151aebd5291fcdac9c4dd34d83e845870d125a1bf59 993870147d916517e

Audit Updates

Initial Audit	19th September 2022
Corrected	

Contract Analysis

Critical
 Medium
 Minor / Informative
 Pass

Severity	Code	Description	Status
•	ST	Stops Transactions	Passed
•	OCTD	Transfers Contract's Tokens	Passed
•	OTUT	Transfers User's Tokens	Passed
•	ELFM	Exceeds Fees Limit	Passed
•	ULTW	Transfers Liquidity to Team Wallet	Passed
•	MT	Mints Tokens	Passed
•	ВТ	Burns Tokens	Passed
•	ВС	Blacklists Addresses	Passed

Contract Diagnostics

CriticalMediumMinor / Informative

Severity	Code	Description	Status
•	STC	Succeeded Transfer Check	Unresolved
•	L01	Public Function could be Declared External	Unresolved
•	L04	Conformance to Solidity Naming Conventions	Unresolved
•	L05	Unused State Variable	Unresolved
•	L07	Missing Events Arithmetic	Unresolved
•	L12	Using Variables before Declaration	Unresolved
•	L14	Uninitialized Variables in Local Scope	Unresolved

STC - Succeeded Transfer Check

Criticality	minor / informative
Location	contract.sol#L558
Status	Unresolved

Description

According to the ERC20 specification, the transfer methods should be checked if the result is successful. Otherwise, the contract may wrongly assume that the transfer has been established.

```
bool success;
uint256 campaignBalance = amtBalance;
(success,) = campaignWallet.call{value: campaignBalance, gas: 35000}("");
```

Recommendation

The contract should check if the result of the transfer methods is successful or complete eliminate the success variable since now it is redundant.

L01 - Public Function could be Declared External

Criticality	minor / informative
Location	contract.sol#L275,364,382,577
Status	Unresolved

Description

Public functions that are never called by the contract should be declared external to save gas.

transfer
getCirculatingSupply
isBlacklisted
enableTrading

Recommendation

Use the external attribute for functions never called from the contract.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contract.sol#L33,390,116,117,118,119,120,128,134,135,136,137,156
Status	Unresolved

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
WETH
_antiSnipe
_antiBlock
startingSupply
_name
_symbol
_decimals
_tTotal
_taxRates
...
```

Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

L05 - Unused State Variable

Criticality	minor / informative
Location	contract.sol#L103
Status	Unresolved

Description

There are segments that contain unused state variables.

_r0wned

Recommendation

Remove unused state variables.

L07 - Missing Events Arithmetic

Criticality	minor / informative
Location	contract.sol#L414,419,436,445
Status	Unresolved

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_maxTxAmount = (_tTotal * percent) / divisor
_maxWalletSize = (_tTotal * percent) / divisor
swapThreshold = (_tTotal * thresholdPercent) / thresholdDivisor
piSwapPercent = priceImpactSwapPercent
```

Recommendation

Emit an event for critical parameter changes.

L12 - Using Variables before Declaration

Criticality	minor / informative
Location	contract.sol#L606
Status	Unresolved

Description

The contract is using a variable before the declaration. This is usually happening either if it has not been declared yet or the variable has been declared in a different scope.

check

Recommendation

The variables should be declared before any usage of them.

L14 - Uninitialized Variables in Local Scope

Criticality	minor / informative
Location	contract.sol#L606,605
Status	Unresolved

Description

The are variables that are defined in the local scope and are not initialized.

check checked

Recommendation

All the local scoped variables should be initialized.

Contract Flow

Summary

Froggo is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a limit of max 7% fees.

The role "originalDeployer" has the authority to blacklist addresses. According to the schedule, the role "originalDeployer" will be renounced some weeks after the launch of the token. Since the "originalDeployer" is a trusted address, these findings are not mentioned.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
