Corrected	18th November 2022

# **Contract Analysis**

Critical
 Medium
 Minor / Informative
 Pass

Severity	Code	Description	Status
•	ST	Stops Transactions	Unresolved
•	OCTD	Transfers Contract's Tokens	Passed
•	OTUT	Transfers User's Tokens	Passed
•	ELFM	Exceeds Fees Limit	Passed
•	ULTW	Transfers Liquidity to Team Wallet	Passed
•	MT	Mints Tokens	Passed
•	ВТ	Burns Tokens	Passed
•	ВС	Blacklists Addresses	Passed

## ST - Stops Transactions

Criticality	medium
Location	contract.sol#L937,891
Status	Unresolved

#### Description

The contract owner has the authority to stop the transactions for all users excluding the owner. The owner may take advantage of it by setting the \_percentageOfLiquidityForMarketing to a value greater than 100.

```
uint256 marketingFee =
newBalance.mul(_percentageOfLiquidityForMarketing).div(100);
```

The contract owner has the authority to stop the purchases for all users excluding the owner. The owner may take advantage of it by setting the maxWalletToken to zero.

```
uint256 contractBalanceRecepient = balanceOf(to);
require(
    contractBalanceRecepient + amount <= maxWalletToken,
    "Exceeds maximum wallet token amount."
);</pre>
```

#### Recommendation

The contract could embody a check for not allowing setting the maxWalletToken less than a reasonable amount. A suggested implementation could check that the maximum amount should be more than a fixed percentage of the total supply. The maximum value of \_percentageOfLiquidityForMarketing should be 100.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user

from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

# **Contract Diagnostics**

CriticalMediumMinor / Informative

Severity	Code	Description	Status
•	CO	Code Optimization	Unresolved
•	L02	State Variables could be Declared Constant	Unresolved
•	L04	Conformance to Solidity Naming Conventions	Unresolved
•	L05	Unused State Variable	Unresolved
•	L07	Missing Events Arithmetic	Unresolved
•	L09	Dead Code Elimination	Unresolved

## CO - Code Optimization

Criticality	minor / informative
Location	contract.sol#L578
Status	Unresolved

#### Description

There are code segments that could be optimized. A segment may be optimized so that it becomes a smaller size, consumes less memory, executes more rapidly, or performs fewer operations. The state variable <code>\_maxTxAmount</code> is initialized by the total supply and can never be changed. As a result, the conditions that are using it will never be truth.

```
uint256 public _maxTxAmount = _tTotal;
...
if (from != owner() && to != owner()) {
    require(amount <= _maxTxAmount, "Transfer amount exceeds the maxTxAmount.");
}
...
if (contractTokenBalance >= _maxTxAmount) {
    contractTokenBalance = _maxTxAmount;
}
```

#### Recommendation

Rewrite some code segments so the runtime will be more performant.

### L02 - State Variables could be Declared Constant

Criticality	minor / informative
Location	contract.sol#L307,562,558,308,564,563
Status	Unresolved

### Description

Constant state variables should be declared constant to save gas.

```
_previousOwner
_name
_tTotal
_lockTime
_decimals
_symbol
```

#### Recommendation

Add the constant attribute to state variables that never change.

# L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contract.sol#L580,579,574,372,566,389,371,568,555,578,554,581,567,409,551,76
Status	Unresolved

#### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
_uniswapV2Router
_inSwapAndLiquify
_maxTxAmount
PERMIT_TYPEHASH
_taxFee
MINIMUM_LIQUIDITY
DOMAIN_SEPARATOR
_percentageOfLiquidityForMarketing
_investingWallet
...
```

#### Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

## L05 - Unused State Variable

Criticality	minor / informative
Location	contract.sol#L308,307,224
Status	Unresolved

## Description

There are segments that contain unused state variables.

\_lockTime \_previousOwner MAX\_INT256

#### Recommendation

Remove unused state variables.

## L07 - Missing Events Arithmetic

Criticality	minor / informative
Location	contract.sol#L746,766,758,753,763
Status	Unresolved

#### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_minTokenBalance = minimumToken
maxWalletToken = _maxToken
_liquidityFee = liquidityFee
_taxFee = taxFee
_percentageOfLiquidityForMarketing = marketingFee
```

#### Recommendation

Emit an event for critical parameter changes.

## L09 - Dead Code Elimination

Criticality	minor / informative
Location	contract.sol#L270,283,276
Status	Unresolved

## Description

Functions that are not used in the contract, and make the code's size bigger.

abs
toInt256Safe
toUint256Safe

#### Recommendation

Remove unused functions.

Updated Date	2022-05-26T18:27:02Z
Registry Expiry Date	2023-12-13T13:23:29Z
Registrar WHOIS Server	whois.bluehost.com
Registrar URL	http://www.bluehost.com/
Registrar	FastDomain Inc.
Registrar IANA ID	1154

The domain was created 11 months before the creation of the audit. It will expire in about 1 year.

There is no public billing information, the creator is protected by the privacy settings.

## Summary

The Smart Contract analysis reported one medium severity issue. The contract owner has the authority to stop transactions. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats. There is also a limit of max 18% fees.

## About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
