| Corrected     | 24th August 2022 |

# **Contract Analysis**

CriticalMediumMinorPass

| Severity | Code | Description                        | Status     |
|----------|------|------------------------------------|------------|
| •        | ST   | Stops Transactions                 | Passed     |
| •        | OCTD | Transfers Contract's Tokens        | Passed     |
| •        | OTUT | Transfers User's Tokens            | Passed     |
| •        | ELFM | Exceeds Fees Limit                 | Passed     |
| •        | ULTW | Transfers Liquidity to Team Wallet | Unresolved |
| •        | MT   | Mints Tokens                       | Passed     |
| •        | ВТ   | Burns Tokens                       | Passed     |
| •        | ВС   | Blacklists Addresses               | Unresolved |

# **ULTW - Transfers Liquidity to Team Wallet**

| Criticality | minor              |
|-------------|--------------------|
| Location    | contract.sol#L1075 |
| Status      | Unresolved         |

#### Description

The contract owner has the authority to transfer funds without limit to the team wallet. These funds have been accumulated from fees collected from the contract. The owner may take advantage of it by calling the withdrawStuckBNB method.

```
function withdrawStuckBNB() external onlyOwner {
   payable(msg.sender).transfer(address(this).balance);
}
```

#### Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

## BC - Blacklists Addresses

| Criticality | medium            |
|-------------|-------------------|
| Location    | contract.sol#L953 |
| Status      | Unresolved        |

## Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the blacklistAddress function.

require(!blacklisted[from] && !blacklisted[to], "Transfer made by blacklisted
address");

#### Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

# **Contract Diagnostics**

CriticalMediumMinor

| Severity | Code | Description                                | Status     |
|----------|------|--|------------|
| •        | CR   | Code Repetition                            | Unresolved |
| •        | L01  | Public Function could be Declared External | Unresolved |
| •        | L03  | Redundant Statements                       | Unresolved |
| •        | L04  | Conformance to Solidity Naming Conventions | Unresolved |
| •        | L07  | Missing Events Arithmetic                  | Unresolved |
| •        | L09  | Dead Code Elimination                      | Unresolved |

## **CR - Code Repetition**

| Criticality | minor             |
|-------------|-------------------|
| Location    | contract.sol#L989 |
| Status      | Unresolved        |

## Description

There are code segments that are repetitive in the contract. Those segments increase the code size of the contract unnecessarily.

```
if(automatedMarketMaker[to]) {
    uint256 sellFees = amount.mul(sellTotalFees).div(100);
    amount = amount.sub(sellFees);
    super._transfer(from, address(this), sellFees);
}
//Buy
else {
    uint256 buyFees = amount.mul(buyTotalFees).div(100);
    amount = amount.sub(buyFees);
    super._transfer(from, address(this), buyFees);
}
```

#### Recommendation

Create an internal function that contains the code segment and remove it from all the sections. For instance, a takeFee() method could replace both statements.

## L01 - Public Function could be Declared External

| Criticality | minor / informative  |
|-------------|--|
| Location    | contract.sol#L280,288,305,312,331,339,350,368,390,409,565,574,876,883,890,8 96,902,908,914,921,931,941,945 |
| Status      | Unresolved   |

## Description

Public functions that are never called by the contract should be declared external to save gas.

```
name
symbol
decimals
totalSupply
transfer
allowance
approve
transferFrom
increaseAllowance
...
```

#### Recommendation

Use the external attribute for functions never called from the contract.

## L03 - Redundant Statements

| Criticality | minor / informative |
|-------------|---------------------|
| Location    | contract.sol#L148   |
| Status      | Unresolved          |

## Description

The contract contains statements that are not used and have no effect. As a result, those segments increase the code size of the contract unnecessarily.

Context

#### Recommendation

Remove the redundant statements in order to decrease the code size.

# L04 - Conformance to Solidity Naming Conventions

| Criticality | minor / informative  |
|-------------|--|
| Location    | contract.sol#L594,595,631,632,649,669,844,921,810,811,812,813,814,821,822,8 26 |
| Status      | Unresolved   |

#### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
DOMAIN_SEPARATOR
PERMIT_TYPEHASH
MINIMUM_LIQUIDITY
WETH
distributedProtocolBNB
_amm
_projectWallet
_operationsWallet
_stakingWallet
...
```

#### Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

## L07 - Missing Events Arithmetic

| Criticality | minor / informative           |
|-------------|-------------------------------|
| Location    | contract.sol#L876,883,890,936 |
| Status      | Unresolved                    |

## Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
buyTotalFees = newBuyLiqFee.add(newBuyMarketingFee)
sellTotalFees = newsellLiqFee.add(newSellMarketingFee)
BNBThreshold = newThreshold * 10 ** 17
walletMax = newLimit * 10 ** 9
```

#### Recommendation

Emit an event for critical parameter changes.

## L09 - Dead Code Elimination

| Criticality | minor / informative |
|-------------|---------------------|
| Location    | contract.sol#L473   |
| Status      | Unresolved          |

## Description

Functions that are not used in the contract, and make the code's size bigger.

\_burn

## Recommendation

Remove unused functions.

# **Contract Functions**

| Contract           | Туре           | Bases      |            |           |
|--------------------|----------------|------------|------------|-----------|
|                    | Function Name  | Visibility | Mutability | Modifiers |
|                    |                |            |            |           |
| SafeMath           | Library        |            |            |           |
|                    | add            | Internal   |            |           |
|                    | sub            | Internal   |            |           |

# **Contract Flow**

# Summary

There are some functions that can be abused by the owner like transferring funds to the team's wallet and blacklisting addresses. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats. There is also a limit of max 20% fees.
