Audit Updates

Initial Audit	5th October 2022
Corrected	

Contract Analysis

CriticalMediumMinor / InformativePass

Severity	Code	Description	Status
•	ST	Stops Transactions	Passed
•	OCTD	Transfers Contract's Tokens	Unresolved
•	OTUT	Transfers User's Tokens	Passed
•	ELFM	Exceeds Fees Limit	Passed
•	ULTW	Transfers Liquidity to Team Wallet	Unresolved
•	MT	Mints Tokens	Passed
•	BT	Burns Tokens	Passed
•	ВС	Blacklists Addresses	Passed

OCTD - Transfers Contract's Tokens

Criticality	minor / informative
Location	contract.sol#L321
Status	Unresolved

Description

The contract owner has the authority to claim all the balance of the contract. The owner may take advantage of it by calling the methods clearStuckToken or bulksend.

```
function clearStuckToken(address tokenAddress, uint256 tokens) external onlyOwner
returns (bool success) {
    if(tokens == 0){
        tokens = BEP20(tokenAddress).balanceOf(address(this));
    }
    return BEP20(tokenAddress).transfer(msg.sender, tokens);
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ULTW - Transfers Liquidity to Team Wallet

Criticality	minor / informative
Location	contract.sol#L315
Status	Unresolved

Description

The contract owner has the authority to transfer funds without limit to the team wallet. These funds have been accumulated from fees collected from the contract. The owner may take advantage of it by calling the clearStuckBalance method.

```
function clearStuckBalance(uint256 amountPercentage) external onlyOwner {
    uint256 amountBNB = address(this).balance;
    uint256 amountToClear = ( amountBNB * amountPercentage ) / 100;
    payable(msg.sender).transfer(amountToClear);
}
```

Recommendation

The contract could embody a check for the maximum amount of funds that can be swapped. Since a huge amount may volatile the token's price.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

CriticalMediumMinor / Informative

Severity	Code	Description	Status
•	ZD	Zero Division	Unresolved
•	L01	Public Function could be Declared External	Unresolved
•	L04	Conformance to Solidity Naming Conventions	Unresolved
•	L07	Missing Events Arithmetic	Unresolved

ZD - Zero Division

Criticality	critical
Location	contract.sol#L334
Status	Unresolved

Description

The contract is using variables that may be set to zero as denominators. As a result, the transactions will revert.

The variable totalFee can be set to zero and provoke zero division. As a result the transfer transaction will be reverted.

```
function _transferFrom(address sender, address recipient, uint256 amount) internal returns (bool)
{
    //..
    if(shouldSwapBack()){ swapBack(); }

function swapBack() internal swapping {
    uint256 totalBNBFee = totalFee;
    uint256 amountToLiquify = (swapThreshold * liquidityFee)/(totalBNBFee * 2);
}
```

Recommendation

The contract should prevent those variables to be set to zero or should not allow to execute the corresponding statements.

L01 - Public Function could be Declared External

Criticality	minor / informative
Location	contract.sol#L444
Status	Unresolved

Description

Public functions that are never called by the contract should be declared external to save gas.

getCirculatingSupply

Recommendation

Use the external attribute for functions never called from the contract.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contract.sol#L152,477,408,474,416,425,121,478,397,381,373,57,389,168,471,43 5,470,154,243,472,158,476,144,238,155,479
Status	Unresolved

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
totalSupply
config_MaxTransaction
_buy
Set_Wallets
setFees_base1000
_marketingFeeReceiver
WETH
config_TradingStatus
update_fees
...
```

Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

L07 - Missing Events Arithmetic

Criticality	minor / informative
Location	contract.sol#L408,416
Status	Unresolved

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
sellMultiplier = _sell
liquidityFee = _liquidityFee
```

Recommendation

Emit an event for critical parameter changes.

Summary

There are some functions that can be abused by the owner like transferring tokens to the team's wallet and transferring funds to the team's wallet. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats. There is also a limit of max 10% fees on buy transactions, a max of 12% fee on sell transactions, and a max of 5% transfer fee.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
