Contract Review

Contract Name	HODLXRP
Compiler Version	v0.8.15+commit.e14f2714
Optimization	5000 runs
Licence	MIT
Explorer	https://bscscan.com/token/0x32Ef0cE6078cfdEF67f3E 21D40d3eE9D437A7B06
Symbol	HODLXRP
Decimals	18
Total Supply	1,000,000,000
Domain	hodlxrptoken.com

Source Files

Filename	SHA256
contract.sol	540b1a3b2ee579cfe19e48c25d6b1dff90702922206a4 4b0de0cdbb4429f3867

Audit Updates

Initial Audit	17th June 2022
Corrected phase 1	22nd June 2022
Corrected phase 2	4th July 2022

Contract Analysis

CriticalMediumMinorPass

Severity	Code	Description
•	ST	Contract Owner is not able to stop or pause transactions
•	OCTD	Contract Owner is not able to transfer tokens from specific address
•	OTUT	Owner Transfer User's Tokens
•	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
•	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
•	MT	Contract Owner is not able to mint new tokens
•	ВТ	Contract Owner is not able to burn tokens from specific wallet
	ВС	Contract Owner is not able to blacklist wallets from selling

BC - Blacklisted Contracts

Criticality	medium
Location	contract.sol#L422

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the setBlacklistEnabledMultiple function.

```
function setBlacklistEnabledMultiple(address[] memory accounts, bool
enabled) external onlyOwner {
    antiSnipe.setBlacklistEnabledMultiple(accounts, enabled);
    for(uint256 i = 0; i < accounts.length; i++){
        setDividendExcluded(accounts[i], enabled);
    }
}</pre>
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

CriticalMediumMinor

Severity	Code	Description
•	L01	Public Function could be Declared External
•	L04	Conformance to Solidity Naming Conventions
•	L07	Missing Events Arithmetic
•	L12	Using Variables before Declaration
	L13	Divide before Multiply Operation
•	L14	Uninitialized Variables in Local Scope

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L325,342

Description

Public functions that are never called by the contract should be declared external to save gas.

setNewRouter
approveContractContingency

Recommendation

Use the external attribute for functions never called from the contract.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L33,439,511,120,123,134,136,137,138,140,156,162,170,171,172,17 3,174,189,209

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_hasLiqBeenAdded
_taxWallets
masterTaxDivisor
maxRoundtripTax
maxTransferTaxes
maxSellTaxes
maxBuyTaxes
_ratios
_taxRates
...
```

Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L484,493,499,516

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
reflectorGas = gas
piSwapPercent = priceImpactSwapPercent
swapThreshold = (_tTotal * thresholdPercent) / thresholdDivisor
_maxTxAmount = (_tTotal * percent) / divisor
```

Recommendation

Emit an event for critical parameter changes.

L12 - Using Variables before Declaration

Criticality	minor
Location	contract.sol#L605

Description

The contract is using a variable before the declaration. This is usually happening either if it has not been declared yet or the variable has been declared in a different scope.

check

Recommendation

The variables should be declared before any usage of them.

L13 - Divide before Multiply Operation

Criticality	minor
Location	contract.sol#L668

Description

Performing divisions before multiplications may cause lose of prediction.

```
toLiquify = ((contractTokenBalance * ratios.liquidity) / (ratios.total)) / 2
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor
Location	contract.sol#L605,604

Description

The are variables that are defined in the local scope and are not initialized.

checked check

Recommendation

All the local scoped variables should be initialized.

Registrar	PSI-USA, Inc. dba Domain Robot
Registrar IANA ID	151

The domain has been created in 12 months before the creation of the audit.

There is no public billing information, the creator is protected by the privacy settings.

Summary

The Smart Contract analysis reported one medium severity issue. The contract owner has the authority to blacklist addresses. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats. There is also a limit of max 15% fees.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
