Contract Review

Contract Name	CoinToken
Compiler Version	v0.8.10+commit.fc410830
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/token/0xd9b0eb6aede8f63edbae4201f8bda8429dc0eff7
Symbol	ZBV
Decimals	18
Total Supply	20,000,000,000
Domain	zombiverse.ai

Source Files

Filename	SHA256
contract.sol	07bf1b7844f274d1a10ddee98f577cf68a2ddd06b515b7f1fd68066d11f3b0b1

Audit Updates

Initial Audit	11th June 2022
Corrected	

Contract Analysis

● Critical   ● Medium   ● Minor   ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ST - Stop Transactions

Criticality	critical
Location	contract.sol#L913

Description

The contract owner has the authority to stop the sales for all users excluding the owner. The owner may take advantage of it by setting the `sellTaxes` to high values. As a result the transfer amount will not be sufficient and the transaction will revert.

```
tax += baseUnit * sellTaxes["marketing"];
tax += baseUnit * sellTaxes["dev"];
tax += baseUnit * sellTaxes["liquidity"];
tax += baseUnit * sellTaxes["charity"];

if(tax > 0) {
    _transfer(from, address(this), tax);
}
```

Recommendation

Read more about the fees manipulation in the corresponding section.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ELFM - Exceed Limit Fees Manipulation

Criticality	critical
Location	contract.sol#L1078,1088

Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the `setSellTax` function with a high percentage value.

```solidity
function setSellTax(uint256 dev, uint256 marketing, uint256 liquidity, uint256 charity) public onlyOwner {

    sellTaxes["dev"] = dev;
    sellTaxes["marketing"] = marketing;
    sellTaxes["liquidity"] = liquidity;
    sellTaxes["charity"] = charity;
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklisted Contracts

Criticality	medium
Location	contract.sol#L1002

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `enableBlacklist` function.

```
equire(!isBlacklisted(msg.sender), "CoinToken: sender blacklisted");
require(!isBlacklisted(recipient), "CoinToken: recipient blacklisted");
require(!isBlacklisted(tx.origin), "CoinToken: sender blacklisted");
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical   ● Medium   ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L05	Unused State Variable
●	L13	Divide before Multiply Operation
●	L14	Uninitialized Variables in Local Scope

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L177,185,202,209,216,228,236,247,265,293,312,518,526,1016,1023, 1031,1039,1046,1054,1070,1108,1116

Description

Public functions that are never called by the contract should be declared external to save gas.

```
disableTax
enableTax
removeExclude
disableBlacklist
enableBlacklist
burn
unpause
pause
triggerTax
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L838,843,848,831,835,840,845,837,842,847,836,841,846,833

Description

Constant state variables should be declared constant to save gas.

```
swapThreshold
marketingTaxWallet
marketingTaxSell
marketingTaxBuy
liquidityTaxWallet
liquidityTaxSell
liquidityTaxBuy
devTaxWallet
devTaxSell
...
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L638,639,656,692

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
WETH
MINIMUM_LIQUIDITY
PERMIT_TYPEHASH
DOMAIN_SEPARATOR
```

Recommendation

Follow the Solidity naming convention.
https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

L05 - Unused State Variable

Criticality	minor
Location	contract.sol#L835,836,837,838,840,841,842,843,845,846,847,848

Description

There are segments that contain unused state variables.

```
charityTaxWallet
liquidityTaxWallet
marketingTaxWallet
devTaxWallet
charityTaxSell
liquidityTaxSell
marketingTaxSell
devTaxSell
charityTaxBuy
...
```

Recommendation

Remove unused state variables.

L13 - Divide before Multiply Operation

Criticality	minor
Location	contract.sol#L890

Description

Performing divisions before multiplications may cause lose of prediction.

```
charityETH = (ethGained * ((charityTokens * 10 ** 18) / taxSum)) / 10 ** 18
devETH = (ethGained * ((devTokens * 10 ** 18) / taxSum)) / 10 ** 18
marketingETH = (ethGained * ((marketingTokens * 10 ** 18) / taxSum)) / 10 ** 18
liquidityETH = (ethGained * ((liquidityTokens / 2 * 10 ** 18) / taxSum)) / 10 **
18
baseUnit = amount / denominator
...
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor
Location	contract.sol#L896

Description

The are variables that are defined in the local scope and are not initialized.

```
tax
```

Recommendation

All the local scoped variables should be initialized.

Summary

There are some functions that can be abused by the owner like stopping transactions, manipulating fees and blacklisting addresses. The contract can be converted into a honeypot and prevent users from selling if the owner abuses the admin functions. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
